Mark Your Plastic With Ease

Are you searching for a worry-free solution to add indelible marks to plastic substrates for product identification?

Discover the U510 UV Laser - the compact, all-in-one laser coder which excels on modern sustainable packaging developments such as recyclable flexible mono-material polymers including thin films. Utilising UV light, coding is achieved by a photochemical reaction in the top layer of substrates, which keeps the protective barrier of packaging intact and enables the marking of white and coloured products anywhere.

Key Benefits

- **Class Leading Code Clarity** - The U510 applies pin-sharp human and machine-readable codes through a laser spot diameter of only 30µm.
- **Ease of Integration** - The all-in-one controller and laser unit make production line integration easy, fan cooling removes the need for water or factory air.
- **Uptime and Reliability** - Domino Cloud enables remote diagnostics and 24/7 visibility of your laser's performance.
- **Fume Extraction** - Domino's DPX Fume Extraction Systems effectively filter fume and particulate debris from the coding process.
